RjDipanshu

Summary

Computer Science graduate with hands-on experience in Java, Spring Boot, RESTful APIs, SQL, and Object-Oriented Programming through internship and backend application development. Experienced in developing REST APIs, implementing JWT-based authentication, integrating relational databases, debugging backend services, and testing APIs using Postman. Strong foundation in DBMS, Data Structures, software engineering, and scalable backend application development.

Education

Sagar Institute of Research and Technology (SIRT), Bhopal B.Tech in Computer Science and Information Technology	CGPA: 7.42/10	Aug 2022 – Jun 2026
Manav Devi Dedicated Inter College, Palamu, Jharkhand (JAC) Intermediate (Class XII)	85.6%	Mar 2020 – Jun 2022
Sacred Heart School, Chianki, Palamu (ICSE) Matriculation (Class X)	70%	Mar 2019 – Mar 2020

Technical Skills

Programming: Java, SQL, Python, JavaScript
Core Java: OOP, Collections, Exception Handling, JDBC, Data Structures & Algorithms
Backend: Spring Boot, Spring MVC, RESTful APIs, JPA/Hibernate (Basics), Maven
Security & Integration: JWT Authentication, REST, JSON, API Integration, Swagger/OpenAPI
Databases: MySQL, SQL, PostgreSQL (Basics), Oracle (Basics), SQL Query Optimization
Software Engineering: Object-Oriented Design, Design Patterns, DBMS, SDLC
Development Tools: Git, GitHub, Postman, IntelliJ IDEA, VS Code, Apache Tomcat (Basics)

Experience

Full Stack Developer Intern – Infosys SpringBoard	Feb 2026 – Apr 2026
- Developed the backend of a Smart Parking Management System using Java, Spring Boot, REST APIs, and MySQL, following a layered architecture for maintainable backend development. - Designed and implemented secure RESTful APIs for authentication, parking allocation, booking, and payment workflows using JWT-based authorization. - Implemented backend business logic and database integration while optimizing SQL queries for improved application performance and data efficiency. - Tested and debugged APIs using Postman, integrated frontend and backend services, and collaborated through Git in an Agile development environment.	
AI Intern – Mirai School of Technology	Jan 2026 – Feb 2026
- Developed AI-powered applications using Large Language Models (LLMs), REST APIs, and workflow automation to solve real-world business use cases. - Built and integrated AI workflows using LLMs and external APIs for automated data processing and task execution. - Used prompt engineering and AI-assisted development tools for code generation, debugging, testing, and technical documentation. - Evaluated AI-generated outputs using structured datasets and refined prompts to improve response quality and reliability.	

Projects

ParkEase – Smart Parking Management System

- Developed a full-stack smart parking management system using Java, Spring Boot, React.js, and MySQL with a layered backend architecture.
- Designed RESTful backend services for user authentication, parking management, slot allocation, booking, and payment workflows.
- Implemented JWT-based authentication and role-based access control to secure application endpoints.
- Integrated backend services with MySQL using relational data models and optimized SQL queries for efficient data retrieval.
- Tested and debugged REST APIs using Postman and managed source code using Git/GitHub.

Job Application Portal

- Developed a job application platform using Java, Spring Boot, React.js, and MySQL with a modular backend architecture.
- Built RESTful APIs for user authentication, job posting, job applications, candidate profiles, and application tracking.
- Implemented JWT-based authentication and designed relational database entities for users, jobs, applications, skills, and candidate information.
- Applied backend validation, exception handling, API testing with Postman, and Git-based version control throughout development.

Certifications

Infosys Springboard: Java Programming, Spring Boot, Agile Software Development
NPTEL: Database Management Systems, Cloud Computing
McKinsey.org: Forward Program
SAGE X: Generative AI Fundamentals
